

Electrical Rotary Valve

DKCV-04F

■ Introduction

The rotatory switching valve is a programmable liquid path unit, support 3-Port Distribution Valve, 4-Port Distribution Valve, 6-Port Distribution Valve, 9-Port Distribution Valve and 3-Port Ceramic Valve. It is controlled by external controller to realize connection between valve body and the ports, controller can check the location of the port at any time.

■ Technical Parameter

Valve type	4 port non-distribution valve	Connection	≤450ms(Between two adjacent ports)
Path diameter	1mm	Port switching time	RS485(standard)
Material	Valve body: Alumina ceramics; Valve element: Alumina ceramics	Communication	BCD dip Switch set up the address, can set maximum 15 addresses
		Address setting	9600 or 38400
Maximum pressure	0.4Mpa	Baud rate (bps)	DC24V /1.25A
Condition temperature	0°C~100°C	Power supply	121.5 x 49 x 63.7
Connection	1/4-28UNF	Dimension(mm)	625g

■ Dimension Drawing (Unit:mm)
